

The Dynamic Emergency List

One cleaner gets the booking. Everyone else who accepted can remain in reserve until they become unavailable or the cleaning begins. The reserve is identified before a cancellation happens, not after it.

- No fixed cap
- Reserve closes at job start
- No reliability penalty for reserves

01 · FORMATION

Interest becomes the reserve

THE RESERVE IS NOT A BOOKING

Joining the Emergency List means a professional is interested in taking the booking if it becomes available. It is not a confirmed booking and it does not reserve time in their calendar. Nobody is recruited as a backup, the list is made of people who already accepted the original job.

02 · LIFECYCLE

Checkpoints, and what fails out of them

T-7d

Booked · primary assigned · list created

Assignment rules pick the primary. Every other accepting professional stays on the list.

T-24h

Confirmation window opens

Defined window, with a reminder. Nobody is removed silently.

CONFIRMS

Nothing changes. List held.

WINDOW EXPIRES OR CANCELS

Booking released as an urgent job. Loop 03 runs.

T-6h

Reconfirmation · shorter window

Same two outcomes. The window is shorter because the appointment is close.

T-1h

On the way · arrived

The list stays attached to the booking. A failure here still triggers loop 03.

T-0

Cleaning started · Emergency List closes

Everyone remaining is told: this booking is now underway, thanks for being available.

03 · REASSIGNMENT LOOP

Emergency List becomes an urgent job

URGENT

Primary is no longer confirmed. The booking is pushed to the list.

ELIGIBILITY CHECK

Overlap, service and location eligibility re-checked before anyone is contacted.

FIRST TO ACCEPT

The first eligible professional to accept becomes the new primary.

LIST PERSISTS

Remaining names are not reset or deleted. Protection continues into the next checkpoint.

A fails → C primary list B D E → C fails at T-6h → D primary list B E → loops until the job starts

04 · AVAILABILITY

The list reduces itself

Reserve

B is on the list for Tuesday 10:00–13:00

Accepts

B takes a confirmed job Tuesday 11:00–14:00

Effect

Clash detected. B is removed from that Emergency List automatically, no action required from B.

Record

No cancellation logged, no reliability effect. The position was never guaranteed work.

05 · NOTIFICATION ENGINE

Unlimited list, prioritised push

LIST SIZE

2 interested → 1 primary + 1 reserve

5 interested → 1 primary + 4 reserve

12 interested → 1 primary + 11 reserve

Reliability

Response history

In a dense area the list can hold 99 names without 99 simultaneous pushes. Waves go out in rank order until the booking is accepted.

06 · CUSTOMER-FACING LANE

Everything above resolves to two messages

Your booking is protected.

Shown while the reserve exists. No list, no counts, no operational detail.

Your cleaning professional has changed.

Jessica is unable to attend, but we have already arranged another CleanScape professional for your booking.

Meet Sarah →

BYPRODUCT, NOT YET SCOPED

The list records that several professionals wanted this type of work, in this location, at this time, at this price. That is marketplace demand data for pricing, supply and geographic expansion. Named here, not designed here.

Dynamic Emergency List

— Normal path — Confirmation failed or cancelled — Reserve closes — State change, no notification

THE RULE

One professional gets the booking. Everyone else who accepted stays in reserve until they become unavailable or the cleaning begins.

LIST SIZE IS NOT PUSH SIZE

2 interested gives 1 reserve, 5 gives 4, 12 gives 11. The list is uncapped, the notification engine sends in rank order rather than to everyone at once.

BYPRODUCT, NOT YET SCOPED

Every list records who wanted this work, in this area, at this time, at this price. Demand data for pricing and supply, named here, not designed here.
